Activision Blizzard, Dublin (Ireland)
Localization QA Lead

April 2018 – February 2019

As QA Lead, you need to ensure all software is fully tested for localization and functional issues across multiple languages, and it is released to the highest possible standard within budget and on schedule.

- Leading & coordinating selected test teams (internally/externally) through the production cycle.
- Ensure assigned projects are released on time, within budget & with the highest possible quality.
- Bug database ownership for all projects assigned.
- Support, guidance and mentor the team, providing direct reports and detailed feedback on performance for use in the Annual Review process.
- Create, implement and administrate all project related documentation such as test plans, test scripts, progress tracking, budgets and wrap-up.

Activision, Dublin (Ireland)
QA Localization Language Lead

June 2014 – April 2018

As part of the team responsible for the Project Management and Quality Assurance of Activision games, the main purpose is to ensure that the localized version of a game meets the highest quality standards before being released.

- Create, implement and administrate all project related documentation such as test plans, test scripts, progress tracking, budgets and wrap-up.
- The Language Lead is responsible for providing accurate and timely information to the project Lead/Manager on the progression of their language from a localization perspective.
- Working closely with different teams in the preproduction stage of QA.
- Bugs and text assets database ownership and maintenance.
- Documents workflow hooks (Glossary, Terminology, and Testing Tools).
- Team management, overseeing team's day-to-day activities, providing them with support and guidance.
- Assist Vendors by providing context and familiarizing with updated/new content. Interviewing, sourcing and screening candidates for Localization QA Tester role, Post-mortem reports and feedback.

Activision, Dublin (Ireland)
Localization QA Specialist (Italian)

June 2013 – June 2014

As QA tester, I was responsible for reviewing and implementing systematic test plans. I was collaborating with software developers and project supports to determine project scope and requirements. Success in this role was demonstrated by providing quality work output, screening for errors, and refining usability throughout the software development and implementation process.

- Identify and report mismatches in strings / text.
- Provide the correct translation, and where applicable fix directly via text database.
- Complete daily smoke tests in a timely manner.
- Quickly run through the whole game to check the stability of a build.
- Identify defects, follow test plans, and verify fixes.
- Enter clear and concise bugs into bug tracking database.
- Enter clear and concise bugs into bug tracking database.
- Reproduce issues for programmers and designers.
- Test fixes for programmers and designers.

Core Competencies

- Awareness of the Web Development industry, and new technologies.
- Localization Project Management and QA Localization Testing.
- Developing multi-user applications within a (SOA) service orientated architecture.
- Writing up technical manuals and user instructions.
- Knowledge of payment processing, customs clearance and multi-currency pricing.
- Knowledge of international web standards and protocols
- Experience of software release, documentation and end-user support.
- Competent in debugging code at a hardware level.
- Experience of the full development lifecycle.
- Development of web-based applications, including cross browser testing and accessibility.
- Experienced in testing software in controlled, real situations before it goes live.
- Recommending and implementing technological improvements and efficiencies.
